Contracting the Contraction

-2-

- o square, each side a 1000 meters in length. It is 4. parallel to the Timişoala-Radna railroad.
- There are two wooden hangars See Enclosure (A)7 and a wooden shack 5. 25 by 8 meters in dimensions as well as an underground gasoline tank. The hangars are 30 by 15 meters. The airport has no concrete runways and is entirely covered with grass. The prevailing wind is northeast - southwest, which is also the landing direction.
- The gliders used there are Icar. The todaing gliders are Grunau-Baby and personning gliders are Grunau-Special. Yell flighter planes also were stationed at 6. the airport during the maneuvers which took place in the Timisoara area, in autumn 1951. In the event of war, the airport provides enough space for a fighter or an attack air force regiment. After Techarie Georgescu's purge from the Communist party, the airport's name was changed to "Gheorghiu Dej"; the same name was given to the glider school.
